Author Index for Volume 62 (2003)

Appleby, J.A.D. and D.W. Reynolds, Non-exponential stability of scalar stochastic Volterra equations	(4)	335–343
Bondesson, L., On a minimum correlation problem	(4)	361–370
Bose, M. and B. Mukherjee, Optimal crossover designs under a general model	(4)	413–418
Brown, L.D. and Y. Lin, Racetrack betting and consensus of subjective probabilities	(2)	175–187
Cai, Z., Nonparametric estimation equations for time series data	(4)	379–390
Chang, I.H., B.H. Kim and R. Mukerjee, Probability matching priors for predicting unobservable random effects with application to ANOVA models	(3)	223–228
Chang, M.N., *see* Kepner, J.L.	(1)	87– 92
Cheang, W.-K., *see* Reinsel, G.C.	(2)	123–135
Choi, C. and D. Nam, Some boundary-crossing results for linear diffusion processes	(3)	281–291
Dai, J.J., A note on vertex-reinforced random walks	(3)	275–280
Daria, L., Remark on semigroup techniques and the maximum likelihood estimation	(2)	111–115
Dauxois, J.-Y., *see* Kirmani, S.N.U.A.	(1)	1– 7
Diebolt, J. and S. Girard, A note on the asymptotic normality of the ET method for extreme quantile estimation	(4)	397–405
Dubischar, D., Lipschitz continuous processes for given marginals	(1)	45– 48
Evangelaras, H. and C. Koukouvinos, On maximizing a design estimation efficiency using hidden projection properties	(4)	419–427
Fang, K.-T., D.K.J. Lin and H. Qin, A note on optimal foldover design	(3)	245–250
Fazekas, I., Limit theorems for the empirical distribution function in the spatial case	(3)	251–262
Finkelstein, M.S., A model for spatial survival	(4)	371–378
Geisser, S., *see* Wang, M.-D.	(1)	61– 70
Girard, S., *see* Diebolt, J.	(4)	397–405
González-Barrios, J.M. and A.J. Quiroz, A clustering procedure based on the comparison between the k nearest neighbors graph and the minimal spanning tree	(1)	23– 34
Hadjicostas, P., Consistency of logistic regression coefficient estimates calculated from a training sample	(3)	293–303
Hamers, M. and M. Kohler, A bound on the expected maximal deviation of averages from their means	(2)	137–144
Hörfelt, P., A probabilistic interpretation of the θ-method	(2)	117–122
Horváth, L. and P. Kokoszka, A bootstrap approximation to a unit root test statistic for heavy-tailed observations	(2)	163–173
Kankainen, A., *see* Taskinen, S.	(1)	9– 21
Kepner, J.L. and M.N. Chang, On the maximum total sample size of a group sequential test about binomial proportions	(1)	87– 92
Kim, B.H., *see* Chang, I.H.	(3)	223–228
Kirmani, S.N.U.A. and J.-Y. Dauxois, Testing relative risk under random censoring	(1)	1– 7
Klein, T., Information matrices of maximal parameter subsystems in linear models	(4)	355–360
Kohler, M., *see* Hamers, M.	(2)	137–144
Kokoszka, P., *see* Horváth, L.	(2)	163–173
Konsowa, M.H. and T.F. Oraby, Dimensions of random trees	(1)	49– 60
Koukouvinos, C., *see* Evangelaras, H.	(4)	419–427
Lalley, S.P. and A. Nobel, Indistinguishability of absolutely continuous and singular distributions	(2)	145–154
Le Gall, F., Determination of the modes of a Multinomial distribution	(4)	325–333
León, C.A. and F. Perron, Extremal properties of sums of Bernoulli random variables	(4)	345–354
Li, Y., A martingale inequality and large deviations	(3)	317–321
Lin, D.K.J., *see* Fang, K.-T.	(3)	245–250
Lin, Y., *see* Brown, L.D.	(2)	175–187
Liu, R., *see* Olkin, I.	(4)	407–412
Liu, W., J.-a. Yan and W. Yang, A limit theorem for partial sums of random variables and its applications	(1)	79– 86
Mazliak, L. and C. Rainer, Exact and possible viability for controlled diffusions	(2)	155–161
Mi, J. and A. Naranjo, Inferences about the scale parameter of the gamma distribution based on data mixed from censoring and grouping	(3)	229–243
Mukerjee, R., *see* Chang, I.H.	(3)	223–228
